WELCOME TO HEYDOC!

Presented by: Abdelqader Amira

HeyDoc!
Your first step to feeling better

Slide 1: Our Core

HeyDoc is your calm, judgment-free health companion.
Whether you're unsure, nervous, or just curious — HeyDoc! will walk you through it, step by step.

Your first step to feeling better

Slide 2: The Problem

Healthcare today isn't just expensive — it's inaccessible, overwhelming, and slow.
People don't avoid care because they don't care — they avoid it because they're afraid, confused, or unable to deal with the system.

Even with "benefits," most people feel processed — not cared for.

Access to trustworthy health guidance shouldn't feel like a luxury.

Slide 3: The Real Gap

We're living in a world where **care is expected**, but **not available** — especially in systems where people don't get to choose:

- Schools have thousands of students and a single nurse

- Prisons delay care for days

- Refugees have no consistent access to help

- Workers have insurance, but no time to use it

- Clinics are burned out or gate kept by policy

Slide 4: The Solution

HeyDoc gives people **immediate clarity** about their health — privately, calmly, and without judgment.

You type how you feel.
HeyDoc breaks it down: what it might be, how serious it could be, and what to do next.

If it's mild → hydration, rest, herbal guidance.
If it's serious → connect to a real MD — instantly.

No insurance. No wait.

Slide 5: Who It's Built For

HeyDoc is built for the people often overlooked by traditional care models:

- **Students** struggling with anxiety, cramps, or unexplained fatigue

- **Inmates** with no access to triage for days

- **Refugees** who don't speak the local language

- **Employees** afraid to report symptoms or call off

- **Shelters & NGOs** needing fast, ethical care delivery
- **Qualified Doctors** having access to a job that provides care for those who lack it, and earn money for doing so.

Slide 6: How It Works

🌐 **HeyDoc App (User Chat)**

- Anyone can describe symptoms and get AI-powered triage instantly

- Natural language, text-only interface — no stress, no barriers

🩺 **Doctor Portal**

- Verified MDs log in and accept cases like Uber

- They're paid per consult, fully remote, fully flexible

Slide 6 extended (THE FUNDING)

🛠️ **HeyDoc Helper (Org Dashboard)**

- Schools, prisons, NGOs get access to:

  - Impact reporting

  - Usage analytics

  - Sponsorship controls

  - Referral tools

  - Internal staff training options

Slide 7: The Philosophy

Monthly pricing covers AI chat, real doctor escalations, and anonymous data dashboards to improve care delivery. Nobody pays at the door.
We're not selling to patients — we're selling to the people responsible for them. Healthcare should meet people where they are,before it's too late. No more waiting for care.

Slide 8: The Business Model

We don't charge users.

We charge organizations who **already carry the responsibility**.Flat-fee access. No billing complexity. they already pay we just give them a better system and price they can't refuse.

Type	Example	Why They Pay
🎓 Schools	High schools, universities	Improve attendance, reduce nurse overload
🏛️ Prisons	County jails, state facilities	Lower liability, flag risk faster
🧑‍🦽 NGOs	UN partners, shelters, refugee camps	Mass access with minimal staff
🏢 Corporations	Factories, warehouses, offices	Health support = productivity, loyalty

Slide 9: Smart, Not Loud

We don't compete with hospitals or chase insurance.

We operate **quietly**, behind the scenes:

- Filling gaps

- Supporting real doctors

- Catching problems before they escalate

And we make it easy for anyone, anywhere, to say:

"I don't feel right — what now?"
...and actually get an accurate answer.

Slide 10: Why Now?

- AI is here — but being used wrong

- Healthcare is bloated, not better

- Billions of people are connected by phone, but still disconnected from care

- We have **too many doctors with no platform**, and **too many people with no help**

HeyDoc bridges both.

Slide 11: Why Me?

I didn't come from Stanford.
I came from roots that were soiled to adapt fast and help the ones around me grow — with or without the help of the next.

I've seen how fear keeps people from asking for help.
I've seen how care happens at home when the system fails.
I've seen members of my own family avoid care — not because they didn't need it, but because the process was more painful than the problem.

We're not asking patients to change — we're changing the path they take to better care.

That's why I'm building HeyDoc — to empower people with real, immediate access to understanding their health.

Slide 12: The Ask

seeking a strategic partner to help:
- Build the secure foundation
- Launch in real-world use cases
- Align ethically with systems that care for the underserved

I truly believe we can shift how care starts.
With clarity. With dignity. With HeyDoc!
